VENDOR SEMINAR:

What Chemicals May Migrate into Your Food?

What chemicals may migrate into your food?

Prof. Erich Leitner, TU Graz, Graz, Austria

During this "Lunch and Learn" seminar, Prof. Erich Leitner from TU Graz will give a short introduction to European legislation regarding the migration of chemical compounds from packaging material into food. He will show the impact of NIAS and MOSH/MOAH on food quality and food safety with compelling examples, and he will also compare different analytical approaches for qualifying and quantifying migrated compounds in food samples. In addition, Restek will offer a traditional Prague delicacy—served in sustainable biological packaging material—during this "lunchless" time of the conference.
